The **MixPBX** in a heterogeneous voice network

Virtual Mix PBX

With Visual-Online's *Virtual PBX* you can be a big business, right from your home-office, small office, or virtual office. A hosted PBX means that you can provide the best customer service possible, without the expense or hassle of buying and maintaining your own phone system. Never again have a client feel like they're not getting top-notch care from you or your business. All you need is a phone, we take care of the rest.

Right from our website, within a few clicks and in a couple of minutes, you can have a fully automated, professional, advanced phone system that gives you competitive features like 99.999% uptime, real call routing, simple administration, and professional support.

Small Business Services

Big Business Communication from a Small Business PBX

In a small company, good communication with customers and suppliers is critical. But most small businesses can't afford to buy or maintain expensive phone systems. *Virtual MixPBX* has the perfect small business PBX solution. Our virtual phone system is easy on the wallet but it has all the features of high-priced systems. With our small business phone system, you're not getting a small PBX with limited capabilities. Instead, you're sharing a feature-rich high-end PBX at very low cost.

Here are some of the things you can do with a virtual phone system from Virtual MixPBX.

✔ Reduce costs

With no hardware or software to buy or maintain, you save costs in many ways. There is no big capital outlay for a new system. You get all the high-end features you need without paying extra. And you don't need to hire a receptionist to answer incoming calls.

✔ Get a professional presence

You can greet your callers with a custom, professional business greeting every time they call. They'll know your company is a real, solid business.

✔ Distribute your workforce

With a virtual phone system, you can route incoming calls to any type of phone, anywhere. This lets your employees work from the office, from home, work sites, or on the road. Try doing that with a typical small business PBX. You can even "Go Virtual" - move to a completely "virtual" office, eliminating the expense of office rent.

✔ Pay as you grow

Small businesses often start with a small PBX and have to buy new systems as they grow - or else they pay too much up-front, trying to make sure their system will be big enough to handle future growth. Our small business phone system lets you start as small as you want and grow to unlimited size, while only paying for what you need.

✔ Never ring busy

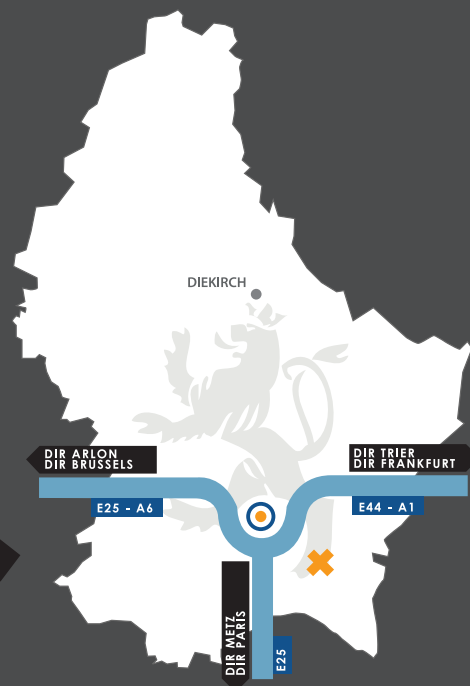

With a traditional small PBX you often have to buy extra phone lines just to keep callers from hearing a busy signal. *Virtual MixPBX* customers just make sure every employee has a working phone (cellular, land line, or VoIP) and never worry about ringing busy. We've got a huge number of incoming lines, and we automatically allocate more lines to your business whenever you need them.

Our virtual phone system includes all of the major features you want, and most are included without extra fees. None of our competitors offer as many features as *Virtual MixPBX*, and most charge extra for the few things they offer, like dial-by-name directories or email delivery of voice and fax messages. Don't settle for low-end voicemail or fax systems masquerading as a virtual phone system. Get your small business PBX service from Visual-Online.
